Children's Dental Membership Scheme

Level 1 (0-3 years) Free of charge

- Two dental appointments per year to provide:
 - Clinical examination
 - Orthodontic advice
 - X-rays where clinically necessary.
- All treatment planning for your child's future dental needs.
- 40% discount on any treatments required.

Level 2 (4-6 years) £3.09 per month

As for Level 1, but also including:

- One hygiene appointment per year to provide:
 - Periodontal advice and treatment
 - Preventive techniques to reduce decay and gum disease.
- Worldwide Dental Trauma Insurance to protect against large unforeseen accidental damage.
- Emergency Callout Insurance should your child need a dentist in an emergency.
- Parental redundancy protection for your monthly plan payments for up to 12 months.

Level 3 (7-17 years) £4.12 per month

As for Level 2, but including one additional hygiene appointment per year.

Our children's schemes are designed to keep the cost of treatment as low as possible for you. We spend a lot of time on prevention and request that all children bring their toothbrush to every check-up appointment.

Facial Aesthetics

Here at [Village Dental Care](#) we can offer a combination of botulinum toxin and dermal fillers to give you a more youthful appearance and help reduce the signs of ageing. Crows feet and frown lines can now be a thing of the past.

Botulinum toxin works by preventing nerve impulses from reaching the muscle; therefore the muscles "relax". Botulinum toxin is the most common facial cosmetic treatment currently used worldwide, and has been used for many years by both men and women as part of facial aesthetic procedures to restore a youthful look.

The injections are virtually painless and the results usually last for six to nine months.

Dermal fillers are made from hyaluronic acid, which is a substance that exists naturally in all living organisms and is an essential component of connective tissues, including skin. Hyaluronic acid has been used to treat joint pain for years. As it is natural and of non-animal origin, there is no chance of allergic reactions.

Dermal fillers are injected with a fine needle to reduce fine lines and wrinkles around the nose and mouth. They can also be used to enhance the lips to give them a fuller appearance.

The procedure takes around 30 minutes and the results can be seen almost immediately. The effects of dermal fillers can last up to a year, but this depends on your age, skin type, lifestyle and muscle activity. The most commonly reported side effects are redness, itching or swelling around the injection site for a few days.

Over time, dermal fillers break down naturally and are replaced with water, so as to gradually produce no adverse symptoms.

The Village Membership Scheme

We have developed our membership scheme to address the needs of all our patients. The main aims of the membership schemes are to: encourage preventative treatment; help spread the cost of treatment and to reward our loyal patients with a significant discount on the cost of any private treatment.

The schemes are extremely simple and easy to understand. We have two levels at which adults can join: standard, and premium. They both include the same benefits, however, the premium level allows the dentist to spend extra time, which is useful for those patients who have a comprehensive examination (as in level 4 care) or have specific needs, for example continuing periodontal (gum) treatment.

The Village Membership Scheme includes:

- Regular dental appointments (two per year)
- Regular hygiene appointments (two per year)
- Preventative advice on oral hygiene and diet
- All necessary x-rays
- 25% discount on any other private treatments such as fillings, CEREC® (with the exception of implants, Invisalign® and facial treatments)
- Worldwide Dental Trauma Insurance to protect against the cost of large unforeseen accidental damage
- Emergency Callout Insurance, should you need a dentist in an emergency anywhere in the world
- Redundancy protection for your monthly plan payments for up to 12 months.

Costs Standard: £10.71 per month
 Premium: £15.00 per month

Additional x-rays, same visit	£3.00	Included
Additional x-rays, OPG	£45.00	Included
<i>Bridges, dentures and other treatments, individually priced.</i>		

All work is guaranteed for two years, assuming it is the treatment carried out that has failed, the failure is not the fault of the patient, and is suitable to replace it with a similar restoration. The only exceptions are root fillings and implants, where we can only ever achieve around 95% success rates, due to factors that are out of our control.

Dear Colleague,

I must be one of the most privileged dentists in the area - Dr Diyari Abdah has joined my practice to provide implant treatments. Dr Diyari Abdah is accepting referrals for implants and, as he is also a qualified Invisalign® practitioner, he is happy to accept referrals for Invisalign® treatment too.

I say I am privileged because he is one of the most enthusiastic, dedicated and talented dentists I have ever met. I first met him at the Pankey Institute in America just over a year ago. Since then, he has been all over the world taking postgraduate training courses on a variety of topics. His love and passion for dentistry just shines through.

You can rest assured he will take the very best care of your patients and can transform even the most difficult cases. He can perform the most amazing bone grafting techniques where he never takes unnecessary risks. We can either restore the patient here, or return them to yourselves for restoration, whichever you prefer.

Dr Abdah has his own practice in Cambridge. If you would like to see his website, please visit www.dentastique.co.uk

I have enclosed a referral pad and look forward to working with you in the future.

Level of Care

How would you like to be seen at our practice?

Our aim is to help you to become as healthy as you choose to be, in a relaxed, caring and friendly environment. There are four levels of care you may choose to follow:

Level 1

Emergency care: if you are in need of emergency care we endeavour to see all our registered patients immediately and all other patients as soon as is practicable.

Level 2

Consultation: if you wish to have one specific problem resolved, we can arrange a consultation to look at that problem, and then arrange another appointment to carry out treatment.

Levels 1 and 2, carried out in isolation without any form of examination does not allow Miss Andrews to take the problem into context with the overall state of your mouth. Therefore, she cannot give her best advice by incorporating the specific problem into an overall treatment plan. It is a short-term fix and does not give long-term predictable results. However, if this is all you choose or are ready for; she is more than happy to provide this service.

Level 3

Examination: a thorough examination is carried out on your teeth, gums and supporting tissues. This level of care provides excellent treatment, however, for most people, even greater long-term results and better predictability can be achieved with our Level 4 care.

Level 4

Full examination: this includes everything in Level 3 plus a comprehensive examination of the joints, muscles and occlusion [bite]. This examination is then usually followed by either splint therapy and/or a detailed analysis of the occlusion on an articulator [a piece of equipment which simulates the jaws]. From here we can aim to restore the mouth into a position of harmony and thus attain long lasting results with predictability.

Level 4 care is for patients who are interested in treating the cause of their dental disease rather than just the effects. They want all treatment to be provided in the most long lasting fashion possible and are happy to take an active role in their achievement of optimal dental health.

Implants

Dr Diyari Abdah DDS MSc (ImpDent)

We are very proud and privileged to have Dr Abdah join our team.

Dr Abdah is our highly experienced implantologist. He carries out all the latest techniques in implant placement and bone grafting and accepts referrals from other dentists as well as treating our own patients. He is also proficient at Invisalign® [invisible braces] that are proving increasingly popular with adult patients.

He graduated from Gothenburg University Dental School, Sweden. After attending many advanced courses, he gained a special interest in aesthetic dentistry and a growing interest in all aspects of dental implantology and grafting techniques. In 2007 he was awarded a Master of Science degree (MSc ImpDent) in the field of implant dentistry from the University of Warwick. Like Miss Andrews, he is constantly attending further postgraduate courses and is also training at the Pankey Institute.

Mr Abdah is a member of the Association of Dental Implantology (ADI), British Dental Association (BDA), and actively involved in promoting implants among GPs, through articles and lectures both in the UK and abroad.
